LIST OF EFFECTIVE PAGES

Insert latest changed pages; dispose of superseded pages in accordance with applicable orders.

NOTE

The portion of the text affected by the latest change is indicated by a black vertical in the margin of the page. Changes to illustrations are indicated by miniature pointing hands or black vertical lines.

Dates of issue for original and changed pages are:

Original	0	1988-07-05	Ch	6	
Ch	1		Ch	7	
Ch	2		Ch	8	
Ch	3		Ch	9	
Ch	4		Ch	10	
Ch	5		Ch	11	

Zero in Change No. Column indicates an original page. Total number of pages in this publication is 574 consisting of the following:

Page No.	Change No.	Page No.	Change No.
Title	0	ix to xv/xvi	0
A	0	1 to 463/464	0
i to vii/viii	0	465 to 559/560	0

PREFACE

1. This publication is an Illustrated Repair Parts Manual and Scale (IRPMS) containing Index 6, PPB Item Number Sequence, and if applicable:

   a. Index 2 — A NATO Stock Number cross-reference.

   b. Index 3 — A Manufacturers' Reference Number cross-reference.

   c. Index 5 — A Contractor's Part Number cross-reference.

2. All of the cross-reference indices are produced from information contained in the Equipment Support List (ESL) 834936, 834937, 834938, 834939, 854502, 834941, 834942, 834943, 834944, 834945, 844907, 834947, 834948, 834949, 834950, 834952, 834951, 834953, 874351.

3. The IRPMS lists the equipment in top-down breakdown sequence indicating major assemblies, sub-assemblies and component parts. It provides:

   a. NATO Stock Number (NSN) designations and identification information for scaled items.

   b. Scaling information for the initial issue and replenishment of repair parts to units and maintenance sections for first and second line repairs.

   c. Scaling assistance to workshops in demanding repair parts required for the complete overhaul of equipment.

4. The Provisioning Parts Breakdown (PPB) item number is used to cross-reference information from the text to the figures (illustrations) and vice-versa.

5. The Figure (F) number (sometimes referred to as Plate (P) number) identifies the illustrations in which that part appears.

6. The NATO Stock Number (NSN) identifies that part within the supply system. When amendments occur, the NSN appearing in CFP 137 shall take precedence.

7. The Indention (IND) code shows the relationship of a part to the next higher assembly. The IND code may appear as an alpha or numeric character: eg, the letter D next to an item shows that it is part of the component or assembly listed above it that is annotated with the letter C, which in turn is a part of the component or assembly annotated with the letter B. Similarly, the number 5 next to a component shows that it is part of the component or assembly listed above it that is annotated with the number 4, etc.

8. The Manufacturers' Reference Number (MRN) is an interface between the manufacturers' nomenclature and the NSN. Where NSNs are not available, the MRN may be used to identify the part to the supply system.

9. The NATO Supply Code for Manufacturer (NSCM) is a five-character code identifying the manufacturer(s) applicable to this manual. A list of these can be found in the following pages of this manual under the title — Manufacturers' Codes.

10. The Unit of Issue (UOI) is the minimum available quantity, weight and length in which each part or component is issued.

11. The Quantity Per is divided into five columns as follows:

   a. Column A represents quantity per assembly.

   b. Columns B to E represent quantity per model.

12. The Maintenance Code (MC) may appear as follows:

a. R1 — Repairable and accountable stores that shall be returned to the supply system classed as either:

(1) Beyond Economical Repair (BER) or Condemned.

(2) Non-Serviceable (NS) — To be backloaded for repair.

b. R2 — Repairable and accountable stores that shall not be condemned but which shall be returned to the supply system, then backloaded for overhaul.

c. C — Parts that shall not be stocked but shall be locally manufactured or reclaimed from salvage.

d. L — Limited supply — Distribution controlled by NDHQ.

13. Operational Essentiality Code (EC) indicates the priority for stockage, using codes developed from reliability and maintainability factors. The general guidelines are:

a. Code 1 — Items that should be prepositioned or initially issued to units regardless of the number of equipment supported.

b. Code 2 — Fast-moving repair parts and repairable assemblies.

c. Code 3 — Parts of medium reliability needed for repair of the main equipment or assemblies.

d. Code 4 — Highly reliable parts and repairable assemblies held as insurance against unforeseen failures.

e. Code 5 — Parts of very high reliability or those which are otherwise readily available.

14. Assessed Quantities (AQ) appear in three columns which are directly related to the corresponding line of repair: eg, 1st column AQ to first line of repair; 2nd column AQ to second line of repair; and 3rd column AQ to third line of repair or overhaul. The general guidelines are:

a. The 1st and 2nd columns AQ provide the means of calculating the quantity of repair parts that should be stocked to support 100 equipments for a period of one year at mid-life. These stock holdings or scaled quantities are calculated by using AQs and the conversion tables which follow this text. Adjustments to stock holdings may be authorized by the Unit Maintenance Officer after reviewing parts usage.

b. The 3rd column AQ may be provided to calculate the quantities of repair parts and assemblies required to support an overhaul program. Quantities appearing in the 3rd column AQ are for overhaul purposes only. Those parts are not to be stocked, but should be ordered prior to commencement of an overhaul program allowing the supply system time for procurement action.

15. Weight per unit of issue in kilograms (WT/UOI) and volume per unit of issue in cubic metres (CU/UOI) may be provided for shipping information.

16. Illustrations identified as figures appear after the Index 6 text. The identified parts are cross-referenced to the PPB numbers.

17. The following cross-reference indices appear after the illustrations (if applicable):

a. Index 2 — Nato Stock Number.

b. Index 3 — Manufacturers' Reference Number.

c. Index 5 — Contractors' Part Number.

18. Changes (amendments) to this IRPMS shall be published by the Office of Primary Interest (OPI) and shall be issued as changed pages. Ink amendments are not permitted.

19. Documents superseded by this IRPMS shall be listed on the title page.

20. Explanatory notes and references (where applicable) will be included at the end of this preface as Special Instructions.

21. Observations, comments and constructive criticisms which could enhance the value of this manual are encouraged. They should be written on the pre-addressed feedback form located at the back of this manual and mailed to NDHQ Ottawa, Canada.

ABBREVIATION LIST

ACC	Accelerator
ADJ	Adjuster
AMP	Ampere
ASSY	Assembly
BKT	Bracket

100	2	2	2	3	3	3	4	4	4	4	5	5	5	5	6	6	6	6	6	7	7	7	7	8

Use of Table:

1. Ensure appropriate table has been selected.
2. Enter left-hand side of table as per AQ shown against item (PPB) in Index 6.
3. Enter top of table in Equipment Dependency area with number of main equipments supported.
4. Read recommended Scaled Quantity (SQ).
5. When AQs above 100 are required, multiples of the above may be used.

Use of Table:

1. Ensure appropriate table has been selected.
2. Enter left-hand side of table as per AQ shown against item (PPB) in Index 6.
3. Enter top of table in Equipment Dependency area with number of main equipments supported.
4. Read recommended Scaled Quantity (SQ).
5. When AQs above 100 are required, multiples of the above may be used.
